### Examples

## HTML Basic Examples

### HTML5 mark Tag

If you want to highlight a text, then use the HTML5 **<mark>** tag. The highlighted text will allow readers to understand the relevance of the highlighted word/words in a particular context.

Always remember, do not use the **<mark>** tag for syntax highlighting. Also, the **<mark>** tag isn't the **<b>** or **<strong>** tag.

### Example

```
<!DOCTYPE html>
<html>
<head>
<title>Understanding HTML5 Mark tag</title>
</head>
<body>
<p> Jimmy Kimmel hosted the <mark>89th</mark> Academy Awards in 2017.
<p> Chris Rock hosted the <mark>88th</mark> Academy Awards in 2016.
</body>
</html>
```

Here's the output, which shows the words highlighted using the HTML5 **<mark>** element,

Jimmy Kimmel hosted the 89th Academy Awards in 2017.

Chris Rock hosted the 88th Academy Awards in 2016.
