HTML Basic Examples

HTML5 footer Tag

Use the HTML5 **footer** tag to add a separate section for footer on the web page. Footer is generally an area at the bottom of a web page or document.

Add copyright information, contact us information, useful links, sitemap, etc in the footer. Do not hesitate to add more than one footer element in a web page or document.

```
<!DOCTYPE html>
<html>
<head>
<title>Understanding footer tag</title>
</head>
<body>
<p>The content solely belongs to:</p>
<footer>
  <p>Copyright 2017 Studyopedia. All rights reserved.</p>
</footer>
</body>
</html>
```

Here's the output,

The content solely belongs to:

Copyright 2017 Studyopedia. All rights reserved.

We have added copyright information under the HTML5 **<footer>** tag. We also added a title to the web page, which would be visible on the page's tab as well as web browsers tab.
