Examples

HTML Basic Examples

HTML5 header Tag

Use the HTML5 **header** tag to add header on the web page or document. Header is an area at the top of a web page or document.

Add introductory content, logo, and with that also add heading elements **<h1>** to **<h6>** under the **<header>** tag.

Here, we will see an example to add header to a web page or document,

Example

```
<!DOCTYPE html>
<html>
<head>
<title>Understanding header tag</title>
</head>
<body>
<header>
<h1>Studyopedia sections</h1>
<h2>Programming</h2>
<h2>Databases</h2>
<h2>Content Management Systems (CMS)</h2>
</header>
</body>
</html>
```

Here' the output,

Studyopedia sections

Programming

Databases

Content Management Systems (CMS)

We have added the sections information under the HTML5 header tag. It includes the top level heading **<h1>** with “**Studyopedia sections**” and other information with **<h2>** heading such as “**Programming**”, “**Databases**”, etc.

We also added a title to the web page “**Understanding header tag**”, which would be visible on the page’s tab as well as web browsers tab.
