Examples

HTML Basic Examples

HTML5 bdi tag

The full form of BDI is Bi-Directional Isolation. If you want to print a text that is different in direction (such as right-to-left) from the texts surrounding it, then use the HTML5 **bdi** tag. Here, you can consider an example of Arabic language, which is right-to-left.

Let's say you want to include user-generated content, with directional, known only to the user. For that, use **<bdi>** tag,

Example

```
<!DOCTYPE html>
<html>
<head>
<title>Understanding HTML5 bdi tag</title>
</head>
<body>
  Favorite tourist destination selected by users,
  <ul>
    <li><bdi> المغربية </bdi>: It is a country in Africa.</li>
  </ul>
</body>
</html>
```

Here's the output showing the usage of HTML5 bdi tag,

Favorite tourist destination selected by users,

- المغربية : It is a country in Africa.

HTML5 aside Tag

HTML5 canvas tag
