HTML Basic Examples

HTML5 main Tag

As the name tells, the HTML5 **main** tag allows you to specify the key content of a document. Whatever you write under the **<main>** tag should be unique. It shouldn't include the content which is included and repeated on every page, such as copyright information, logo, sidebars, etc.

Example

```
<!DOCTYPE html>
<html>
<head>
<title>Understanding HTML5 Main tag</title>
</head>
<body>

<main>
  <h1>World Sports</h1>
  <p>Football and Cricket are the 2 most popular team sports in
  the world</p>

  <article>
    <h1>Football</h1>
    <p>Football is quite popular in Brazil, Argentina, Germany etc</p>
  </article>

  <article>
    <h1>Cricket</h1>
    <p>Invented in England, Cricket now have more than 10 offic</p>
  </article>
</main>
</body>
</html>
```

Here's the output, we're printing the content for World Sports here with headings **Football** and **Cricket** under the **<article>** element. All the content is our key content, so we added under the HTML5 **<main>**

element,

World Sports

Football and Cricket are the 2 most popular team sports in the world.

Football

Football is quite popular in Brazil, Argentina, Germany and many other countries.

Cricket

Invented in England, Cricket now have more than 10 official teams.
