Examples

HTML Basic Examples
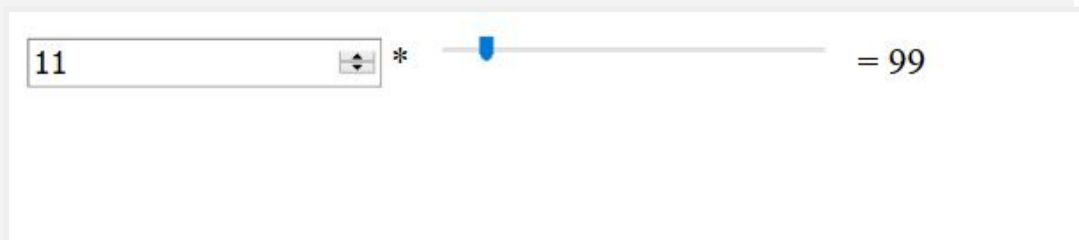

HTML5 output Tag

The HTML5 **output** tag shows the result of a calculation. Output the result with the output element,

Example

```
<!DOCTYPE html>
<html>
<head>
<title>Understanding output tag</title>
</head>
<body>
<form oninput="result.value=parseInt(val1.value)*parseInt(val2.
    <input type="number" name="val1" value="11" /> *
    <input type="range" name="val2" value="9" /> =
    <output name="result">99</output>
</form>
</body>
</html>
```

Here's the output, firstly the initial values are visible i.e. output 99 for multiplication of 11 and 9,

We will drag the **val2** range and now the difference can be seen easily. The output is now 1027 i.e. **val2** is dragged to 79. The new output is shown below,

| 13 | $\updownarrow$ | * | ▮ | = 1027 |

Attributes

- **for**– Specifies the list of IDs of other elements, indicating the elements contributed input values to the calculation
- **form**– This shows the ownership of the element associate with.
- **name** – The name of the element.
